1. Purpose

The purpose of this policy is to establish a systematic management for tracking, controlling, maintaining, and managing physical assets within the organization. This will ensure that all equipment is properly accounted for, maintained in good working condition, and utilized efficiently while also mitigating risks associated with theft, misuse, and obsolescence. This process will also provide accurate and up-to-date information on the organization's equipment inventory, allowing for informed asset purchasing, allocation, and disposal of assets.

2. Scope

This policy applies to all IT equipment used within the organization, including laptops, desktop computers, mobile devices, monitors, peripherals, servers, telecommunication devices, and networking equipment.

3. Roles and Responsibilities

- a) All IT Field Service Engineers (FSE) personnel are responsible for implementing and maintaining the IT equipment inventory system, including updating and auditing IT assets. The Facilities Administration Team and Local IT are responsible for handling IT equipment prior to endorsement to the user and upon return from the user.
- b) All employees are responsible for taking care of and using the equipment in a responsible and ethical manner. Any misuse, mishandling, loss, or damages must be reported to Human Resources immediately for investigation and action.
- c) Human Resources is responsible for investigating any misuse, mishandling, loss, or damages and taking appropriate action to address the issue. They will also be copied on any emails related to defective equipment that require payment or replacement.

4. Policy

a. Equipment Receiving

- i. Global Procurement team informs the IT FSE and Facilities Team of any expected equipment delivery.
- ii. Upon delivery of new equipment, IT FSE will verify if the items and quantity are correct based on the email of the Global Procurement team, Sales Invoice, and Delivery Receipt. In case of discrepancies, IT FSE will inform the Global Procurement team of what the issue is. Until the Global Procurement team

verifies that the items received are correct, the items will be temporarily stored and will be untouched.

- iii. Once items are verified, IT FSE will send an email to the Global Procurement Team and Finance confirming receipt of the items. A soft copy of the Sales Invoice and Delivery Receipts will be attached to the email. A hard copy of the documents will be sent to Finance for filing.
- iv. All equipment received will be tagged and labeled based on the asset tagging format. Details of the equipment will then be entered into our inventory tracker and system.

b. Equipment Assignment

- i. When an employee requires IT equipment such as a laptop, desktop, headset, and other peripherals they must submit an eService ticket for the equipment request.
- ii. The request must be approved by the head of the department.
- iii. In case the equipment is not available, the request will be sent to Global Procurement for purchase.
- iv. If the equipment is available, IT FSE will prepare the equipment. Details of the assignee and equipment will be entered on the Accountability Form. The inventory system will be updated to include the details of the assignee. IT FSE will contact the requestor that their equipment is ready for pick-up.
- v. Upon pick-up, the requestor will verify the details of the equipment and the details on the accountability form. Once verified, the requestor will need to sign the accountability form. The equipment will be released to the requestor and they will be provided a copy of the signed accountability form.

c. Equipment Return

- i. When an employee no longer requires their assigned IT equipment or is no longer connected to the company, they must return the equipment to the IT department.
- ii. Upon receipt of the returned equipment, the IT FSE must verify if the details of the returned equipment are correct. They must also confirm that the returned equipment is in good working condition.

- iii. If the equipment contains any company data or confidential information, the IT FSE must ensure that the data is securely wiped or destroyed before the equipment is reused or disposed of.
- iv. An asset Surrender form will be given to the employee to prove that the equipment has been returned.
- v. An email is sent to the supervisor of the employee who returned the equipment. The email will include the condition of the returned items. In case any of the equipment is defective, HR will be copied on the email for processing of payment for the defective item.

d. Equipment Tracking

- i. The IT FSE must maintain an up-to-date inventory that includes information such as equipment asset tags, models, serial numbers, locations, and assigned users.
- ii. Regular physical inventory checks and audits will be conducted to ensure the accuracy and completeness of the inventory records.
- iii. Any changes in equipment location or users should be updated in the inventory smart sheet immediately.
- iv. Asset lifecycle management guidelines will be established, including when equipment should be replaced or upgraded, how depreciation will be handled, and how end-of-life equipment will be handled.

e. Equipment Repair and Maintenance

- i. The IT FSE is responsible for providing regular maintenance and repair of IT equipment to ensure optimal performance.
- ii. All maintenance and repair activities should be tracked and recorded in the inventory smart sheet.

f. Equipment Disposal

- i. Outdated or broken equipment will be disposed of in accordance with environmental regulations and company policies.
- ii. Data-containing devices will be securely wiped or destroyed before they are disposed of or transferred to another employee.

5. Enforcement

Failure to comply with this IT Equipment Inventory Documentation may result in disciplinary action.

6. Definitions and Abbreviations

- a) **IT equipment** - refers to any device or system that processes, stores, or transmits information, including but not limited to computers, mobile devices, telecommunication devices, and networking equipment.
- b) **Asset tagging** - a unique identifier assigned to an asset to help track and manage its lifecycle.
- c) **Accountability form** - a form that details the equipment assigned to an employee, including the model and serial numbers, the employee's name, and the date of issuance.
- d) **Asset Surrender form** - a form that details the equipment being returned, including the model and serial numbers, the employee's name, and the date of return.
